

Statement Environmental awareness at Seabourne Logistics

As a freight forwarder, we recognize the crucial role we play in the global supply chain and are aware of the impact our activities can have on the environment. That is why it is very important to us to be environmentally aware and to promote sustainability in all our operational processes.

We strive to minimize our environmental footprint by applying sustainable choices in all our activities. This includes optimizing transportation routes to improve fuel efficiency, reducing emissions through the use of cleaner, zero-emission vehicles, and promoting the use of alternative fuels where possible.

In addition, we work closely with our suppliers and partners to find and implement sustainable solutions. We encourage the use of reusable packaging, promote the recycling of materials and reduce the waste of resources through efficient planning and inventory management.

As a freight forwarder, we also recognize the value of digitization and technological innovation in reducing environmental impact. We invest in advanced IT systems and technologies that enable us to optimize transport processes, reduce paper consumption and increase efficiency.

In addition, we are committed to making our employees aware of the environmental issues and involving them and informing them as much as possible about our sustainability efforts.

Our goal is to interact consciously with each other in the field of environmental awareness and sustainability. We are determined to play our part in preserving the environment, reducing climate change and creating a liveable planet for future generations. We strive continuously to improve our environmental performance and work with all stakeholders to make a positive impact on the environment.
